**SIR HAMZA AND SIR FAHAD**

A close-up photograph of several white calla lilies. The large, smooth, white petals are the primary focus, with several bright yellow stamens visible in the center of the flowers. The lighting is soft, highlighting the texture of the petals and the vibrant color of the stamens.

PRESANTATION OF

NEXT.JS

What is page.tsx?

In Next.js a page.tsx file is typically a typescript file that defines a page component in a Next.js application.

What is link tag why do we use this tag and what is its purpose?

Link tag is a HTML element and its used to define relationship between the current document and tag is essential for linking external resources to an HTML document improving its functionality and performance.

How can we create nested page in next.js?

Creating nested pages in Next.js is straightforward and involves organizing your files within the `pages` directory. To create nested routes, you'll organize your files into subdirectories within the `pages` folder. For example, if you want a route like `/blog/post`, you would set up your directory structure.

what are component and why do we use them in short?

Components are reusable pieces of code that represent a part of a user interface (UI) in applications, especially in frameworks like React and Next.js.

What is Tailwind CSS and what are the different between tailwind and stand CSS?

Tailwind CSS enhances Next.js development by offering a streamlined and efficient way to style applications with minimal custom CSS. Tailwind CSS enhances Next.js development by offering a streamlined and efficient way to style applications with minimal custom CSS. While standard CSS can lead to larger files if not managed properly (especially with many custom styles),

```
@tailwind base;  
@tailwind components;  
@tailwind utilities;AND  
const Button = () => { return <button className="bg-blue-500 text-white p-2">Click Me</button>; };
```
